

Hägglunds Inside Intelligence

Your smart link between drive and performance

You and your drive system can both do more with Bosch Rexroth expertise. By selecting a Häggglunds drive solution, you've already chosen wisely. And with Häggglunds Inside Intelligence, your choice becomes that much smarter.

Häggglunds Inside Intelligence is a modern suite of products and services that connect you and your drive with Bosch Rexroth expertise. Through smart technology within your drive system – combined with mobile devices and interactive solutions – it puts our half-century of experience right in your hands.

What matters isn't the technology, but the productivity and peace of mind you achieve. Through instant analysis, real-time advice and condition monitoring, as well as predictive maintenance and other forms of proactive support, we help you increase your drive utilization and lower your cost of ownership.

Häggglunds CM and **Häggglunds Cmp with ODIN**, for instance, enable condition monitoring by establishing a link between your drive system and Bosch Rexroth expertise. Häggglunds CM provides entry-level monitoring and logging,

while Häggglunds Cmp with ODIN offers a machine health index, including historical data, trending and deeper analytics. The latter's secure and encrypted data communication lets us – or your own skilled engineers – look within your drive to optimize performance and initiate condition-based maintenance.

Using augmented reality, **Häggglunds InSight Live** connects Bosch Rexroth service experts with the local maintenance team on site. Through a mobile device or a pair of video goggles, our central service experts literally see what the onsite team sees. In real time, they can provide instruction and interact visually to guide service actions.

These are just a few examples from a growing portfolio of cutting-edge solutions. With Häggglunds Inside Intelligence, you have the tools to unlock the full potential of your Häggglunds drive system
